

Job Descriptions

1. Data Scientist

Job Title: Data Scientist

Location: Pune / Remote

Experience: 2–5 Years

Role Overview:

We are seeking a skilled Data Scientist to analyze large datasets, build predictive models, and generate actionable insights. The ideal candidate should have strong analytical thinking, hands-on machine learning experience, and the ability to communicate results effectively.

Key Responsibilities:

- Analyze structured and unstructured datasets to extract insights
- Perform data cleaning, preprocessing, and feature engineering
- Build, train, and evaluate machine learning models
- Apply statistical methods to solve business problems
- Collaborate with engineering teams to deploy models
- Communicate findings to stakeholders through reports and dashboards

Core Skills:

- Strong proficiency in Python
- Solid understanding of Machine Learning algorithms
- Experience with data analysis and statistics
- Ability to work with real-world datasets

Secondary / Trainable Skills:

- SQL and database querying
- Pandas, NumPy, Scikit-learn
- TensorFlow or PyTorch
- Data visualization tools (Matplotlib, Seaborn)

Tools & Technologies:

- Python
- SQL
- Jupyter Notebook
- Git
- ML frameworks

Domain:

- Data Science
- Machine Learning
- Analytics
