ABOUT ME

Third-year Computer Engineering student with a strong interest in software development, artificial intelligence, and machine learning. Passionate about applying AI-driven approaches to business and finance problems to improve efficiency, insights, and decision-making. Aspiring to build scalable, data-driven solutions that create measurable impact across technology and financial domains.

EDUCATION

ISBM College of Engineering, Pune

Bachelors in Computer Engineering

Nande, Pune

Jun. 2023 – Jun. 2027

MT Balwadkar Jr. College

11th and 12th grade (SSC)

Balewadi, Pune

Jun. 2021 – Mar. 2023

SNBP World School

10th grade (Cambridge International (IGCSE Curriculum))

Rahatani, Pune

Mar. 2021

EXPERIENCE / POSITIONS OF RESPONSIBILITY

Training and Placement Cell

January 2025 – Present

Associate Vice President – Student Progression and Corporate Relations Cell

- Directed a team of approximately 40 members, distributing responsibilities and fostering teamwork to achieve objectives.
- Maintained communication with corporate recruiters and handled company requirements
- Led and coordinated campus placement drives and internship programs

PROJECTS

Digital Plant Brain || *Python, FastAPI, SQLite, React, TypeScript, Tailwind CSS*

January 2026

- Automated Knowledge Ingestion: Capable of parsing unstructured manufacturing SOPs and documents using Llama-3 to automatically generate structured digital twin models of production lines.
- Discrete Event Simulation: Includes a robust SimPy-based simulation engine that models stochastic production processes, including machine cycles, failure rates, and buffer capacities to predict throughput
- Interactive Digital Twin: Features a dynamic React-based Graph Visualization that maps out plant entities (Machines, Belts, Buffers) and their logical connections, allowing users to explore the facility's structure intuitively
- AI-Powered Insights: Provides on-demand, context-aware AI explanations for specific connections or entities within the graph, explaining the "why" behind relationships based on the source SOP.
- Modern Full-Stack Architecture: Built on a high-performance FastAPI backend and a polished React/TypeScript frontend with a glassmorphism design, ensuring a responsive and user-friendly experience.

FinText || *Python, JavaScript, HTML, CSS, Flask, Pandas, SQLite, Machine Learning*

April 2025

- Built a web-based personal finance dashboard that allows users to upload transaction data and track expenses efficiently
- Designed and trained a machine learning model to automatically categorize transactions into spending categories
- Implemented features for monthly budget suggestions and future expense predictions based on spending patterns and historical data
- Developed dynamic visualizations like interactive pie charts to help users understand their financial habits at a glance
- Created a clean, user-friendly interface with options for profile editing and logout confirmation, using Flask templates and custom HTML/CSS styling
- Provides a pie chart to visually show monthly expenses

TECHNICAL SKILLS

Languages: Java, Python, C++, HTML, CSS

Developer Tools: GitHub, VS Code, PyCharm, IntelliJ

Frameworks and Libraries: React, Flask, FastAPI

Databases: SQLite
