

Job Description: Backend Engineer (Git-Focused)

This role focuses on designing and building scalable backend services with strong emphasis on frameworks, databases, APIs, and Git-based workflows.

1. Programming Languages

- JavaScript (Node.js) or Python / Java

2. Backend Frameworks

- Express.js / NestJS / FastAPI / Spring Boot
- RESTful API design

3. Databases & Storage

- PostgreSQL / MySQL
- MongoDB / Redis
- ORMs: Prisma / Sequelize / SQLAlchemy

4. Auth, Security & APIs

- JWT / OAuth-based authentication
- Input validation and API security

5. Git & Deployment Basics

- Git workflows and code reviews
- Docker basics
- Environment and config management

This job description emphasizes concrete languages, frameworks, libraries, and Git workflows over generic role statements.
